CHRYSLER ARCH TOWER STRUCTURE OVERVIEW

18'-8" x 16'-0" Tower Gen 2

23'-4" x 20'-0" Tower Gen 2

28'-0" x 24'-0" Tower Gen 2

32'-8" x 28'-0" Tower Gen 2

COLUMN DETAIL

Silver Metallic ACM (aluminium composite material) panels wrap the tower on all sides. The arch band (inside trim) is made from Bright Specular (mirror-like) ACM.

Panels have consistent sizes (with consistent reveals) allowing for easy replacement if damaged.

Access panels are concealed at the rear and easily accessible.

A kick panel is installed at the base of the tower to conceal the foundation and can be field adjusted per individual leveling requirements.

GENERAL DETAIL

Building fascia is not connected to nor is it part of the Arch Tower.

Maximum visual impact is accomplished if the tower stands 6"-15" away from the building allowing full access around the legs.

Sign Placement - Dealer name letters will be installed during manufacturing to reduce field installation time and costs.

Access must be available to interior of tower to make electrical connections and provide service to the structure.

ARCH TOWER DETAIL

The Arch Tower head will match the column legs in materials and depth and will bolt-on.

The top of the tower arch is designed to deflect water away from the entry and front door. Water drains to the ends of the top of the arch and is guttered to internal down spouts that will carry the water away from the building.

The tower is designed to be free-standing from the building.

Canopy Lighting - (2) Halo accent lights mount under the inside radius to illuminate the entry.

INSTALLATION & PRICING

Tower prices are estimated based on using our standard sizes. Custom sizes, adjustments to a standard tower, and/or nonstandard installation conditions may require additional charges.

Additional charges will apply to areas with high wind load requirements.

CHRYSLER REQUIREMENTS/RESTRICTIONS

Requires an upgrade to the Millennium Branding System.

Fascia must meet current Chrysler specifications.

Location and placement of arch is subject to Chrysler approval.
